Skills Summary

Languages/Database: TypeScript, HTML5, CSS3, MySQL, MongoDB, Redis

Frameworks/Library: Node JS, React JS, Express JS, Next JS, Redux, Saga, WebSocket, Styled Components, Tanstack Query

Tools/Platforms: AWS, Claude code, GitHub, Docker, Postman, Figma

Soft Skills: Leadership, Problem-Solving Skills, Communication

Experience

Full Stack Developer, PRP Services

Aug 2025 – present

- Working on a microservices-based architecture, developing scalable backend services using Node.js, with containerization and orchestration via Docker and Kubernetes on AWS.
- Building responsive web applications using Next.js and implementing Redis for caching to improve performance and scalability.

Full stack developer, ABCDE Technologies

Dec 2024 - Jul-2025

- End-to-end development of a full-stack web application modules by building responsive frontend interfaces using ReactJs, NextJs
- Developing robust, modular RESTful APIs and database schemas using Go-Gin and MySQL.
- **Tech stacks:** PostgreSQL, Go-Gin, ReactJs, Redux, NextJs, Tailwind

Projects

RCS(Rich Communication Services) - Next JS, Tailwind CSS, NodeJS, MySQL

- Architected and implemented RBAC for Admin, Enterprise User, and Viewer roles. Added permission checks for sensitive modules like campaign lists, billing, templates, and reports.
- Integrated external RCS provider APIs for message submission, template management, and campaign reporting. Built retry logic and failover handling for unstable provider responses.
- Developed webhook receivers to handle real-time events such as message delivery reports, read receipts, and template approvals. Ensured idempotency and logged events for analytics.

OpenCoot - Electron, ReactJs, Node.js, Langflow, Ollama

- Built an enterprise-level cross-platform desktop application using Electron, ReactJs, and Node.js for macOS and Windows environments.
- Developed AI workflow execution and automation systems using Langflow, integrated with LLM models dynamically loaded based on user requirements and usage.
- Implemented secure sandboxing architecture to maintain application privacy, isolated execution, and enterprise-grade security standards.
- Integrated third-party connectors such as GitHub, Slack, and Email services to automate workflows, communication, and operational tasks using AI agents.

WhatsApp Campaign Management System - NextJs, Node.js, Golang, Microservices, GraphQL, Redis, RabbitMQ

- Built a scalable RBAC-based WhatsApp campaign platform for clients and resellers with campaign management, billing, analytics, and dashboard modules.
- Integrated WhatsApp GraphQL APIs and Meta webhooks to handle real-time message delivery, status updates, and event processing.

- Used Redis caching for high-throughput campaign processing and optimized message delivery with improved TPS performance.
- Implemented RabbitMQ queue architecture to efficiently manage high webhook traffic and asynchronous event handling from Meta services.
- Optimized dashboard performance and large-scale data handling using pagination, debouncing, and efficient API management techniques.

ShortURL (SMS) - GoLang, MySQL, Redis, MicroService

- Built a standalone ShortURL microservice responsible for generating unique short keys, mapping them to long URLs, and handling high-speed redirects. Used Redis Pub/Sub for instant updates between the ShortURL service and the tracking/analytics service.
- Implemented Redis caching to store URL mappings and updating the counts related to clicks.

Education

Lovely Professional University, BTech CSE

Aug 2021 – July 2025

- GPA: 7.42

Army Public School, Intermediate

Apr 2019 – Mar 2020

- Percentage: 90.2

Army Public School, Matriculation

Apr 2017 – Mar 2018

- Percentage: 84.6
